

Add Item Call Number Browse Search

Updated 5/6/22

DRAFT

Current functionality

Currently, staff do not have the ability to search item call numbers in a browse search format. Staff can only search item call numbers in a keyword search.

Requested changes

We would like to add a Call Number Browse search. This would be a browse search for the call number in the 952\$o (itemcallnumber) field. It would be available to staff only, and be accessed via the More menu. It should have the following limit options:

- Staff would be able to limit by library.
- Staff would be able to limit by collection code.

The search screen could be similar to the existing OpacAuthorities browse, with some tweaks.

The image shows a 'Browse' search interface on a light yellow background. On the left, there are several form elements: a 'Search for' dropdown menu with 'all authors' selected; a 'Linked' dropdown menu with 'All' selected; a 'Search Focus' dropdown menu with 'main heading' selected; a 'Search Terms' text input field containing 'search terms'; and a 'Sort By' dropdown menu with 'A-Z' selected. A blue 'Search' button is at the bottom left. On the right, a white box with a red border contains the following text: **Call Number Browse**, **Library drop-down menu** [Library names should be listed in alphabetical order by Name], **Collection Code drop-down menu** [Collection Codes should be listed in alphabetical order by Description], **Search Terms: text box**, and **Sort by drop-down: 1-9, 9-1, A-Z, Z-A,**

The results screen would sort the list in the appropriate order, depending on what was selected in the search. The sort should be based on the full call number information that is listed in the field, so that would include a Dewey number in addition to any Cutter or Author information in the field. An example of this sort is shown below. This would be the same type of sort that is done in the “View Nearby Items on Shelf” feature in the Discovery Layer.

The number of matching items would be listed, with clickable links that, when clicked, would take staff directly to the matching item record on the Item Statuses screen.

If there was more than one item, then the user would get a pop-up with each item listed, and from there staff could click on the item and go directly to the matching item record on the Item statuses screen.

There would be 20 results on the screen by default. Staff could click on a **Previous 20 results** link to navigate to the previous 20 results, and a **Next 20 results** link to navigate to the next 20 results. Staff would be able to continue to scroll through the screens of the results in call number order (similar to how patrons can do this in the “View Nearby Items on Shelf” feature of the Discovery Layer). However, staff would be able to continue scrolling through all of the call numbers in the library’s collection code through the last call number in the list.

| Call Number | Number of Items |
|--------------------|---|
| 781.6 C776 | 2 items [clickable link to pop up with each item] |
| 781.6 C78 | 3 items [clickable link to pop up with each item] |
| 781.62 G798 | 1 item [clickable link to item] |
| 781.643 M365p | 1 item [clickable link to item] |
| 781.65 J339k | 2 items [clickable link to pop up with each item] |
| 781.65 J35 | 1 item [clickable link to item] |
