Ideum Touch Tables & Displays:
Pros & Cons

Prepared by: Craig Ellefson, SCLS

As far as an interactive display to use in libraries I think the Ideum products fit the bill. All of their touch tables are made of strong aluminum and it appears they offer a have a travel case for most of their products.

Pros:

- Made in the USA
- 3-year warranty
- Rugged, designed to be moved around
- Windows 11 is offered
- Other software is optional
- The shipping crate appears to have wheels

Cons:

- Used ones sell for around $10,000.00
- Heavy, 130+ lbs without the shipping crate
- Moving something of this size may be an issue
    - Would require a delivery van with a lift gate.
- Programming it to meet individual needs.
    - Still wrapping my head around how to do this.
