Minimum of 5 licenses required for initial contract

\* - More to come

# Virtual Training Facility

Transfr training simulations provide trainees with a hands-on learning experience which utilizes machine learning and theory from learning sciences to calculate the probability that the trainee can actually perform the learned tasks on-the-job. The trainee is provided with coaching until he or she masters the skills required to perform at the expected level on the job. Transfr's intelligent system is capable of quantifying each users' behaviors. This intelligent system is driven by machine learning algorithms that capture behavioral trends in the trainee's performance.

# Career Exploration

Transfr's Career Exploration brings the world of work to students by allowing them to sample real hands-on tasks in a wide variety of well-paying jobs. Students rate how well they enjoy doing the tasks.

# What's Included

- VR Training Headsets
- Implementation and Training
- Technical Support
- Career Success Manager
